

UPPER CAMPUS SAFETY

Spring 2001

RYAN BANDKOWSKI

LORI HAFEMAN

The aim of our GPS project was to determine the degree of safety on UW-Eau Claire's upper campus. For this reason, we have mapped the locations of safety features, such as emergency buttons and light poles, so that we can see their locations relative to student populated areas such as sidewalks and parking lots. We plan to submit these findings to the Campus Safety office on upper campus. This could possibly help in deciding future locations of safety features.
